UNIVERSAL CABINET SLEEVER

UCS: The Universal Cabinet Sleever handles a wide variety of sleeve sizes and shapes. It features non-porous air bags that inflate with compressed air to shape and form the sleeve to its original cut. The flexibility of the air bags enables it to press lab coats, chef jackets, smocks and executive shirts all with unsurpassed quality. A precise measuring system allows the operator to easily measure the sleeve length. This avoids over-pressing and reduces touch-ups. Production is enhanced by the ease at which the unit can be loaded and unloaded. Built to exacting standards the UCS is designed to provide years of trouble free service.
